

EVENT AGENDA

AGENTIC CODING & AGENTIC DEVOPS WORKSHOP

pronative.ai

09:30		REGISTRATION Check-in, collect your badge and event kit.	
10:00 – 10:15		WELCOME NOTE (NAVEEN – TECH NEXUS) Kickoff the day, set the context and share the agenda.	
10:15 – 10:30		PARTICIPANT ID & TABLE ALLOCATION – WORKSHOP MODE SETUP Get your participant ID, meet your team, and get ready for hands-on.	
10:30 – 11:00		KEY NOTE (DHIWAKAR – GITHUB) — WHY AGENTIC CODING & AGENTIC DEVOPS Understand the shift to agentic development and operations.	
11:00 – 11:30		Environment Setup Set up your development and cloud environment.	
11:30 – 13:00		HANDS-ON SESSION ON AGENTIC CODING (INNER LOOP) Build with AI agents, boost productivity in your inner loop.	
13:00 – 14:00		LUNCH & NETWORKING Recharge, connect, and collaborate.	
14:00 – 15:30		HANDS-ON SESSION ON AGENTIC DEVOPS (OUTER LOOP) Automate, deploy and operate with AI agents in your outer loop.	
15:30 – 15:45		WHY PRONATIVE.AI How we empower AI-native engineering transformation.	
15:45 – 16:00		CLOSING NOTE (VINODH & AZAR – TECH NEXUS) Wrap up, key takeaways and next steps.	

HANDS-ON LEARNING

Real tasks. Real outcomes.

TEAM COLLABORATION

Learn, build and win together.

AGENTIC MINDSET

Code smarter. Operate autonomously.

AI-NATIVE FUTURE

Build the future. Today.

AGENTIC DEVELOPMENT LIFECYCLE

From local development to cloud operations – powered by AI agents

pronative.ai

The Foundry for AI-Native Excellence.

INNER LOOP TOOLS (LOCAL DEV)

Build • Code • Commit • Test

OpenCode CLI

Command line tool
AI-native coding from
your terminal

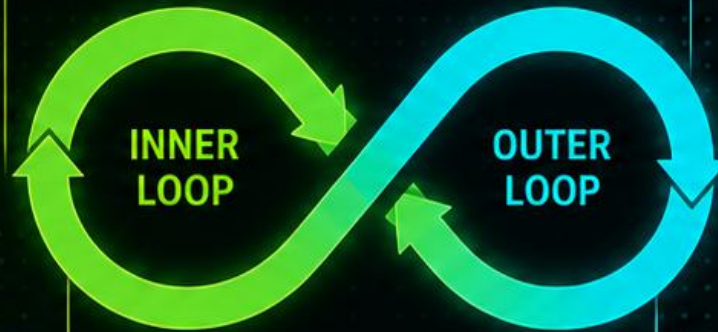

Git

Version control
Track changes and
collaborate safely

VS Code

Code editor
Your intelligent
development environment

pronative.ai Agents

Assist • Automate • Accelerate

OUTER LOOP TOOLS (DEVOPS/CLOUD)

Integrate • Build • Deploy • Operate

GitHub

Code hosting & PRs
Manage code, reviews
and collaboration

GitHub Actions

CI/CD automation
Automate build, test
and deployment

Azure

Cloud deployment
Scalable, secure and
reliable cloud platform

CODE

Write & Refactor

COMMIT

Version & Save

TEST

Validate & Review

PR

Create & Review

CI/CD

Build & Deploy

DEPLOY

Monitor & Operate

CONTINUOUS FEEDBACK & IMPROVEMENT

AI agents learn, suggest and optimize at every step

pronative.ai AGENTIC DEVELOPMENT WORKSHOP – SECURITY ARCHITECTURE

PARTICIPANT WORKSTATION

[PARTICIPANT WORKSTATION]

VS CODE IDE

LOCAL
GIT

OPENCODE

SECURITY:

All keys and tokens are stored locally in the participant's workspace and are never shared or committed.

① ENVIRONMENT SETUP & TOKEN GENERATION

GITHUB PERSONAL ACCESS TOKEN (PAT)

CREATED BY
PARTICIPANT

CREATED BY

AZURE FOUNDRY API KEY

PROVIDED BY
PRONATIVE.AI

USED BY
(OpenCode /
Local LLM Calls)

AZURE SERVICE PRINCIPAL (SP)

PROVIDED BY
PRONATIVE.AI

Securely via
[Secrets]

All credentials are time-bound, scoped and follow the principle of least privilege.

② INNER LOOP (DEVELOPMENT)

[GITHUB REPO]

VS Code / Git

VS CODE &
OPENCODE

opencode.jsonc

LOCAL LLM CALLS
(Using Foundry API Key)

AZURE CLOUD PLATFORM

COMMON PLATFORM FOR INFERENCE & DEPLOYMENT

AI INFERENCE LAYER: MICROSOFT FOUNDRY

CUSTOM DEPLOYMENT –
LLM MODELS (GPT 5.1 & DeepSeek)

③ OUTER LOOP (DEPLOYMENT)

GitHub

Code hosting & PRs

GitHub Actions Runner

CI/CD automation

Uses SP (from Secrets)

PARTICIPANT RESOURCE GROUP (ISOLATED)

DEPLOYED
APP

CONTAINER APP
+ COSMOS DB

NO SHARING

Keys remain local to the participant.

LEAST PRIVILEGE

SP has minimal access to scoped resources.

TIME-BOUND ACCESS

Tokens are short lived and revocable.

SECRETS PROTECTION

Secrets are stored securely in GitHub Secrets.

ISOLATION

Each participant deploys to their own isolated Azure resources.

START: Valid STUDENT ID Required

STEP 1: Environment Setup

Tool: WINDOWS POWERSHELL (Admin)

Running: irm https://pronative.ai | iex

- **Action:** Installs runtimes, CLIs, and editor baseline

(Requires: Step 1 Success)

STEP 2: Auth Token Generation & System Variable Injection

Tool: GITHUB DEVELOPER SETTINGS → WINDOWS ENVIRONMENT SYSTEM

- **UI Action:** Generate Classic PAT with 4 explicit scopes

- **Injection:** Set system level PRONATIVE_GH_TOKEN variable

- **Checkpoint:** Validate token authorization using curl API

(Alert: Input for this step comes from MS TEAMS)

STEP 3: Local OpenCode Custom Models Deployment

Tool: MS TEAMS CHAT → LOCAL APPLICATION CONFIG DIRECTORY

- **Source:** Download `opencode.jsonc` from active session chat

- **Path:** Deploy directly into local `.config/opencode` folder

- **Backup:** Retain `.bkp` clone for post-session rollback

Environment Configured & Verified to begin
Agentic Coding - Inner loop
